

# The Evolution of Writing Systems

## A

Writing is one of humanity's most consequential inventions, fundamentally altering how societies communicate, govern, record, and remember. Long before digital communication and printing presses, early humans began to experiment with visual symbols to represent language. The development of writing systems is not the product of a single moment or culture, but rather a complex, gradual evolution that spanned continents and millennia. From early pictographs carved into stone to the phonetic alphabets of today, writing systems reflect not only linguistic needs but also cultural values and technological innovations.

pictographs evolved into more abstract symbols, and the system became increasingly sophisticated, allowing scribes to record laws, literature, and religious texts. Simultaneously, a similar development occurred in ancient Egypt with hieroglyphics, a writing system that also began as pictorial symbols but grew into a complex blend of logographic and phonetic elements.

## C

Farther east, the Chinese writing system emerged independently around 1200 BCE. The oracle bone inscriptions, used for divination purposes, reveal a logographic script in which each symbol represented a word or morpheme. While the basic structure of Chinese characters has changed

over time, the writing system remains logographic to this day—making it one of the oldest continuously used writing systems in the world. The endurance of Chinese script contrasts with many ancient writing systems that eventually disappeared or were replaced.

D

A major breakthrough in the evolution of writing was the development of alphabets. The Phoenician alphabet, emerging around 1050 BCE, marked a significant departure from complex pictographic or syllabic scripts. This early Semitic script included a small number of symbols, each representing a consonant sound. Because of its simplicity and adaptability, it spread widely through trade networks and was adopted and adapted by

The rise of alphabets greatly democratized literacy. Compared to systems like cuneiform or hieroglyphics, which required years of training and were often monopolized by an elite class of scribes or priests, alphabetic scripts were easier to learn and could be used by a broader segment of the population. This contributed to the spread of written literature, legal codes, and eventually mass education. Nevertheless, complexity remained a hallmark in other writing traditions; the Japanese writing system, for instance, combines Chinese logographs (kanji) with two syllabaries (hiragana and katakana), illustrating how different societies developed hybrid approaches to writing.

## F

The evolution of writing systems was also shaped by material technologies. The shift from clay tablets and stone inscriptions to papyrus, parchment, and eventually paper expanded the reach and utility of writing. With the invention of the printing press in the 15th century, texts could be mass-produced, further transforming literacy and education. In more recent history, typewriters, word processors, and digital keyboards have continued to shape how people interact with written language, while also raising new questions about the durability and preservation of digital text.

## G

How to inform: Write it in the Skype chat or the comments section when making a reservation.  
Study of ancient writing systems offers not only a window into past civilizations but also insights into the relationship between language, culture, and technology. As societies continue to adapt to new communication needs, writing remains a living system—ever changing, yet deeply rooted in human history.

# Questions

## Questions 1–4

### Matching Information to Paragraphs

Which paragraph contains the following information?

Write the correct letter, A–G.

1. A description of how a particular alphabet simplified the learning of writing.
2. The influence of a Middle Eastern script on Western alphabets.
3. How changes in writing materials influenced the spread of written language.

How to inform: Write it in the Skype chat or the comments section when making a reservation.

### Yes / No / Not Given

Do the following statements agree with the information in the passage?

Write:

- Yes if the statement agrees with the claims of the writer.
- No if the statement contradicts the claims of the writer.
- Not Given if there is no information on this.

5. Cuneiform was initially used for religious rituals.
6. The Chinese script has maintained its basic structure over thousands of years.

7. The Phoenician alphabet included both vowels and consonants.
8. Japanese writing was influenced by Chinese script.
9. Digital communication is helping to preserve endangered languages.

---

## Questions 10–13

### Summary Completion

Complete the summary below.

Choose ONE WORD ONLY from the passage for each blank.

The earliest forms of writing developed from simple 10. \_\_\_\_\_ that represented physical objects or ideas. Over time, some cultures replaced
