### Internet Vocabulary

**Internet-** The Internet is a bunch of computers all over the world that are connected to each other. They are setup in such a way that they can exchange information with each other. The Internet includes Email, Newsgroups and the World Wide Web among other services.

**Internet Service Provider (ISP)**-This is the company that supplies you with your connection to the Internet. This usually includes a dial-up service that your computer dials to access the Internet. Some of the bigger ISP's are Pac Bell, IBM and America online (AOL).

**Modem**- This is a piece of hardware that allows your computer to speak with other computers over the phone. Modems come in a number of different speeds. The most common are 14.4, 28.8 and 56.6. The higher the number, the faster information travels to and from your computer.

**World Wide Web Page**- A page that can be accessed on a computer connected to the Internet that can contain text, graphics, video and audio. This page often includes links to other pages and sites.

**Browser**- This is a term used to describe a piece of software that allows you to view web pages. The two most popular browsers on the market are Netscape's Navigator and Microsoft's Internet Explorer.

**World Wide Web Site**- A collection of WWW pages at one location on the Internet .

**World Wide Web(WWW)**- The interconnection of hypertext documents

**plug-in** - Sometimes a web page will try to do something like display a video or audio file that the browser is not able to accommodate. A plug-in is an application that works with the browser to allow you to view, listen, or access these files. Some of the more popular plugins are RealAudio, QuickTime and Shockwave. A helper application is an application similar to a plug-in.

## Activity 1 Identify the pictures

## Activity 2 Guess what?

1. A piece of software that allows you to view web pages :
2. it takes you to another page :
