- growing populations, millions of people go to bed hungry every night The worldwide introduction of high-yield genetically modified crops would certainly be a start to solving this problem.*
5. *Many countries suffer from food shortages because their crops are plagued by disease or insects. Genetically modified crops can be created that are resistant to these pests. Surely farmers who have seen their entire harvests destroyed should have the right to choose such crops.*
 6. *It is true that genetically modified crops may have potential problems. Some people say they might be detrimental to human health in the long term. However, if genetically modified crops are tested rigorously, in the same way that pharmaceutical drugs are, there is no reason why dangerous crops should reach the market.*
 7. *Farmers have always tried to control nature. In some ways, genetic manipulation can simply be seen as a high-tech development along the same lines—one that, if monitored carefully and used responsibly, may ensure our food security.*
