

4. What are allergies?

The human body is incredible. It has all sorts of ways to defend itself against foreign invaders. When something gets in your nose that doesn't belong, you sneeze. Your eyes water to flush out alien objects. Your skin swells to combat invasions such as a bee sting.

★Teacher will ask this question first “Are there any words you don't understand?” after explain those words, teacher will make some questions below each paragraph. And let him say the sentences according to your question. (If the student can't make himself, you'll make the sentences) And let him say it 3 times to memorize it:

But sometimes your body gets just a little carried away and overreacts. It thinks that something is attacking, when it's really not, and it goes a little bonkers.

Please ask them to send the complete version of this material before the lesson.
attack.

★

The antibodies make other chemicals, such as histamines. The work these chemicals do is generally valuable. But in this case, the histamines unnecessarily make the inside of your nose swell so that it's hard to breathe, your nose gets stuffed up, your eyes begin to tear and you develop all the symptoms that you were describing.

★

People have always had allergies. If yours are really bad, your doctor may prescribe an anti-histamine to combat your body's reaction to pollen. But, it's far more likely that your best bet is to keep an extra tissue around and wait for allergy season to pass.
